

The Mine Land Rehabilitation Authority is working with community, industry and government to oversee the rehabilitation of declared mine land to ensure transition to safe, stable and sustainable post-mining landforms in Victoria.

Established on 30 June 2020, we are an independent body which has replaced the Latrobe Valley Mine Rehabilitation Commissioner who monitored mine rehabilitation in the Latrobe Valley since June 2017 when the Hazelwood power station closed.

The creation of the authority was recommended by the 2015 Hazelwood Mine Fire Inquiry. Steered by expert and local board members, we oversee the implementation and effectiveness of the Latrobe Valley Regional Rehabilitation Strategy, a Victorian government project tasked to investigate knowledge gaps for a water-based rehabilitation option for the three Latrobe Valley brown coal mines. We also undertake additional functions in relation to registering, monitoring, maintaining, and owning declared mine land post-closure if required.

Meet with us

We encourage community members and organisations to meet with us to ensure locals are kept informed and involved in mine rehabilitation. Meetings can be arranged virtually or face-to-face in line with COVID recommendations.

If you have any questions or would like to arrange an information session for your group, please contact us:
